TYPES OF POTENTIAL DAMAGES ACCOMPANYING **TROPICAL CYCLONES**

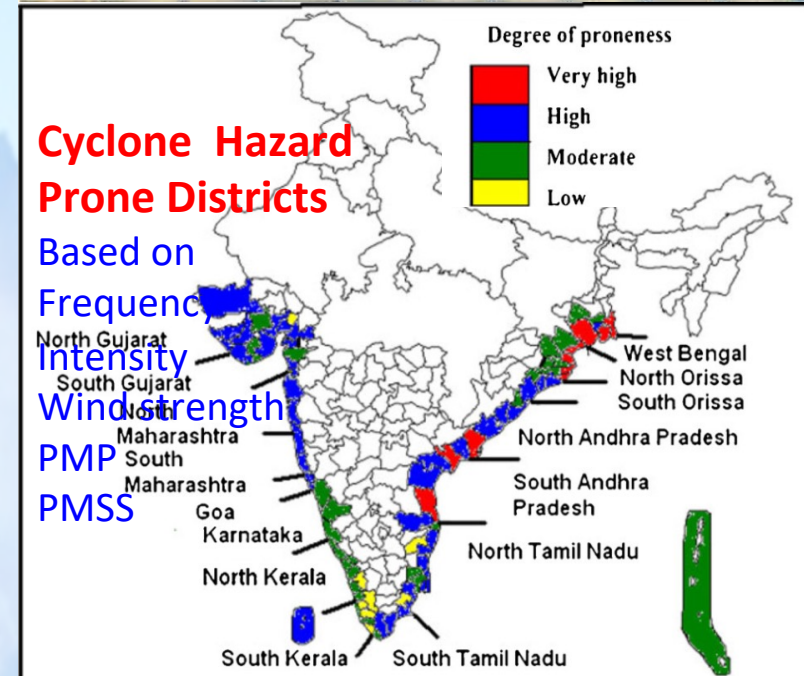

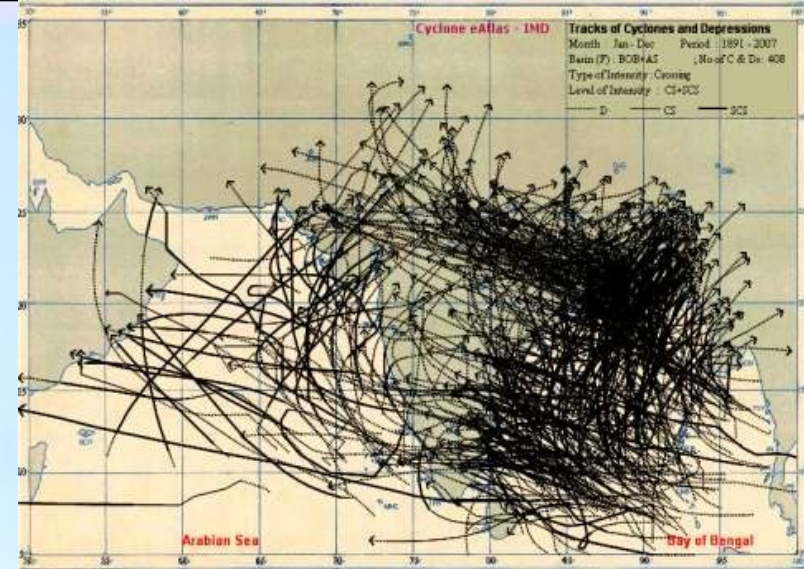

A Few Facts about Tropical Cyclones(TCs)

- ❖ During 1970-2019, 33% of hydro meteorological disasters are caused by TCs.
- ❖ One out of three events that killed most people globally is TC.
- ❖ Seven out of ten disasters that caused biggest economic losses in the world from 1970-2019 are TCs.
- ❖ It is the key interest of 85 WMO Members prone to TCs
- ❖ Casualties of 300,000 in Bangladesh in 1970 is still ranked as the biggest casualties for the last five decades due to TC;
- ❖ Cyclone Monitoring, forecasting and warning services deals with application of all available modern technologies into operational services.

Cyclone in India

- ❖ Out of 80 forming over the globe, five form over north Indian Ocean
- ❖ Ratio of TCs between Bay of Bengal and Arabian Sea – 4:1
- ❖ Bay of Bengal is a vast warm pool.
- ❖ The ocean currents in Bay of Bengal are quite complex. Bathymetry of this coast is very complex due to many rivers, deltaic regions & orography
- ✓ In order to build an effective response mechanism, we need to assess our vulnerability & Risks.
- ✓ Post-landfall impact assessment is integral part of Cyclone warning,
- ✓ Based on data collected, IMD issues impacts expected over coastal Districts
- ✓ Satellite since plays dominant role in (i) development of climatology (genesis, track, intensity) of TC, hazard, vulnerability and risk analysis

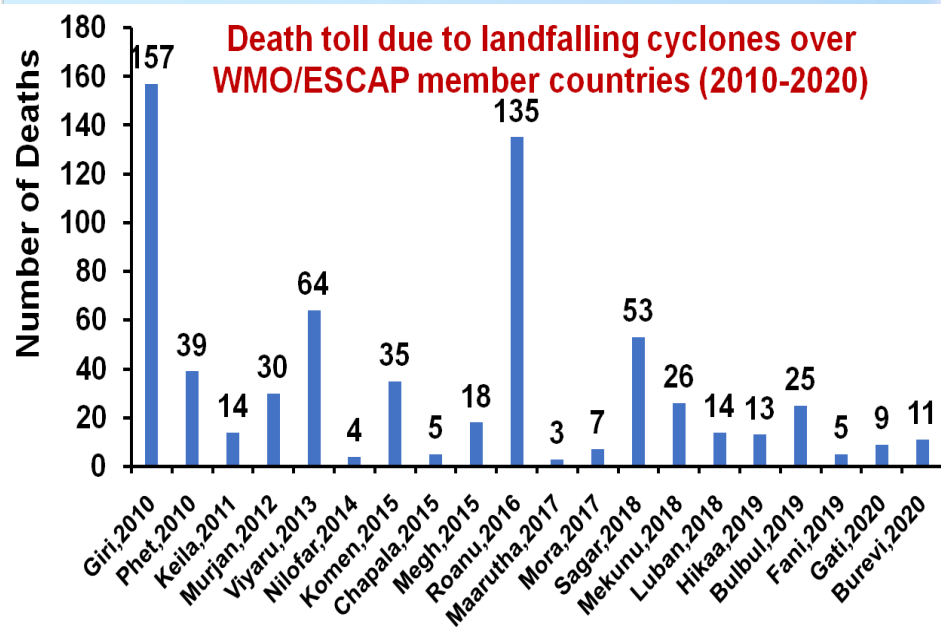

Mohapatra et al(2012) Nat. Haz., (2015), JESS

Outcome of Improved Early Warning System

- Improved confidence of disaster managers/general Public
- Enabled disaster managers and public to minimize loss of lives and properties

WMO Appreciation
Mekunu, 2018

WMO/ESCAP Panel on Tropical Cyclones (PTC) and Somalia, for their early responses. They were also distributed to WMO Secretariat in Geneva, and forwarded to WMO Regional Offices in Bahrain and New York.

In addition to benefiting PTC Members and Somalia, these bulletins were well utilized by WMO Regional Office in Bahrain, to communicate and coordinate with both PTC and other Member States neighboring Oman for their early preparation and necessary actions in response to the tropical cyclones. At the same time, all members of the Inter-Agency Disaster Committee (IADC) with the key UN and non-UN humanitarian partners were informed and WMO representatives in New York used the bulletins to provide a daily briefing to the United Nations Secretary-General's Office and Crisis Center at UN Headquarters, and informed the UN Secretary-General's Executive Office on the development of the tropical cyclones and their potential impacts.

It is a vitally important and effective practice to distribute and communicate RSMC New Delhi's advisory bulletins with Member States, UN and its humanitarian agencies in a timely manner, to enable all those concerned to take necessary and appropriate actions. I will appreciate it very much if such a practice will be continued and strengthened.

I look forward to your continued support to the WMO Tropical Cyclone Programme and activities to reduce risk of disasters to tropical cyclones.

Yours sincerely,
(Dr. Talwar)
Secretary General

UN Appreciation
FANI, 2019

UN agency for disaster reduction has commended Indian Meteorological Department's 'almost pinpoint accuracy' of early warnings that helped authorities conduct a well-targeted evacuation plan and minimise the loss of life.

UN Praises Met Dept for 'Pinpoint Accuracy' on Cyclone Fani That Minimised Loss of Life

Phailin, 2013

Dear Dr. Phailin,

I have learned with deep concern of the casualties and damage to properties in the coastal region of India caused by Cyclone "Phailin".

On behalf of the World Meteorological Organization and myself, I wish to convey my heartfelt condolences and profound sympathy to your fellow citizens, to the Government and people of India.

In the wake of the World Meteorological Organization and myself, I wish to convey my heartfelt condolences and profound sympathy to your fellow citizens, to the Government and people of India.

It is in this regard, I am convinced that the WMO's collective priority to reduce risk and potential impacts of hazards caused by weather, climate, water and related environmental disasters, requires WMO's capabilities for service delivery of a broad, national and regional level, with emphasis on the role of WMO's well-reflective national disaster risk reduction centers. With the advent of its operational and forecasting capabilities, I hope that through WMO we can work together to deliver the best service to the people of India and the world.

As a result of the WMO's collective priority to reduce risk and potential impacts of hazards caused by weather, climate, water and related environmental disasters, requires WMO's capabilities for service delivery of a broad, national and regional level, with emphasis on the role of WMO's well-reflective national disaster risk reduction centers. With the advent of its operational and forecasting capabilities, I hope that through WMO we can work together to deliver the best service to the people of India and the world.

Yours sincerely,
(Dr. Talwar)
Secretary General

ICHL AWARD, PHAILIN, 2013

Indian Institute of Management Raipur

ICHL 2013 Award for Excellence in Humanitarian Action

Indian Meteorological Department
Government of India

in the field of
Early Warning, Forecasting and Dissemination

on 3rd Day of December, 2013

For the premier year in which their tracking of cyclone Phailin from 4th October 2013 onwards, the forecasting of the cyclone trajectory and the best forecast in cyclone Phailin in the affected area.

The Indian Meteorological Department was able to secure the maximum loss of lives in spite of several years' experience globally predicting offshore, comparing the wind speed and wind velocity to the 1999 super cyclone, mainly because of the installation of Doppler weather radars, application of state-of-the-art weather monitoring satellite models, modernization of IMD's monitoring network and the services of the IMD's national staff.

Yours sincerely,
(Dr. Talwar)
Secretary General

HUDHUD, 2014

In this cyclone, India Meteorological Department made excellent utilisation of Technology and from 6th October itself, this cyclone was predicted. The actual wind speed due to cyclone was same as the predicted wind speed. The track of the cyclone was same as that predicted. The time of landfall of cyclone was also same as that predicted by IMD.

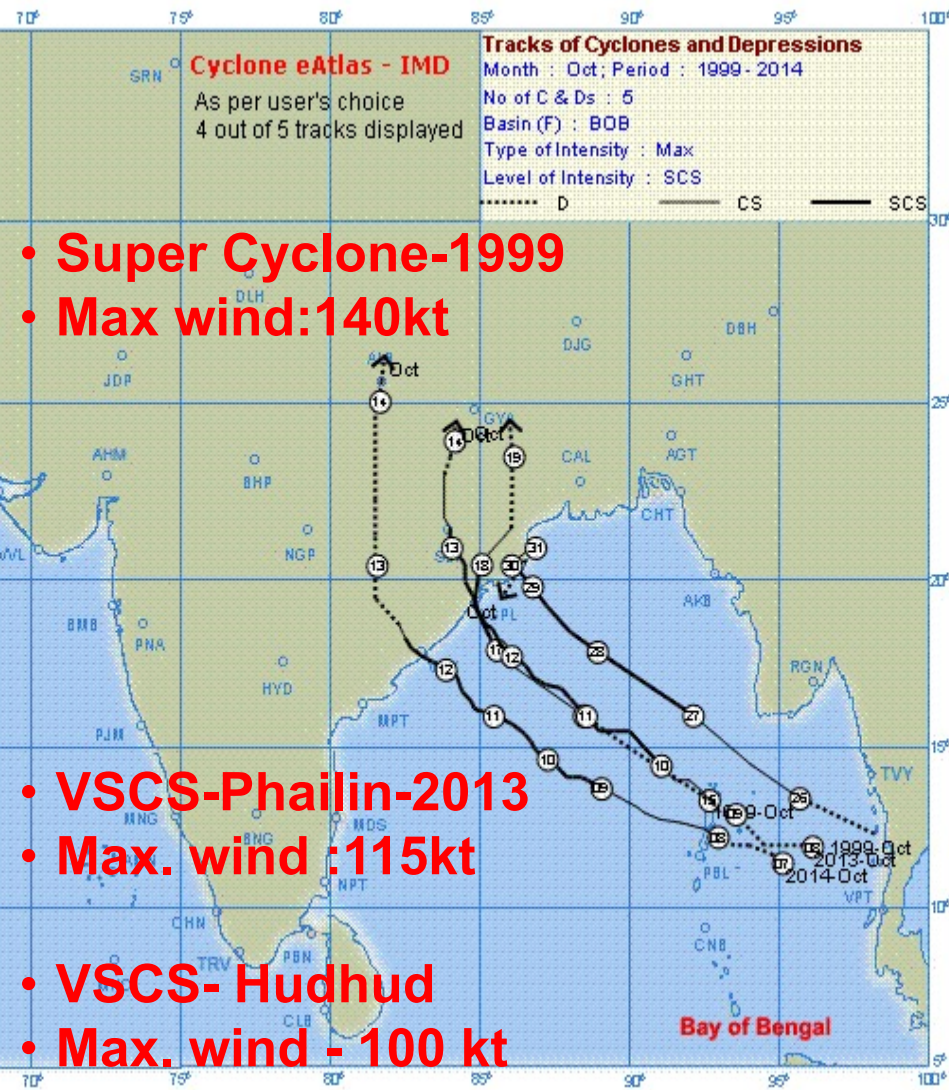

FANI, 2019

Our expertise in accurate weather forecast has improved. This was evidenced during the recent #CycloneFani that struck the eastern coast of the country. Due to accurate information and timely preparation, large scale destruction to life and property was averted.

#PresidentKovind

Web Client

Cyclone warning improvement over the years

- **Super Cyclone-1999**
- No genesis forecast
- Lead period was less (24 hrs)
- Accuracy was moderate
- Poor Warning communication and triggering mechanism
- **VSCS-Phailin and Hudhud(2013-14)**
- 5 day Genesis forecast
- Objective track, intensity and landfall forecast-5 day lead
- Accurate impact based warning (Rain, wind and storm surge)
- Effective communication and triggering mechanism

OUTCOME

SN	PARAMETERS	PARADIP SuCS CYCLONE, 1999	VSCS PHAILIN, 2013
1.	Loss of human life	9887	21
2.	Ex-gratia paid by Govt. @ Rs 0.6 Million	Rs 5930 Millions	Rs 12.6 Millions
3.	Area of evacuation	500 km (approx)	180 km
4.	Cost of evacuation per km (1 Million Rupees assumed)	500 Millions	180 Millions

Calculation is based on assumption that similar amounts would have been spent for evacuation and payment of ex-gratia in 1999 as in 2013

- There is decrease in area of evacuation by 300 km in 20 years and hence evacuation cost by 60 percent
- Decrease in ex-gratia paid by Govt. to survivors by about 99 percent as compared to 1999.

Five Year Moving Average- Track Forecast Error & Skill

- ❖ About 25% decrease in error compared to previous five years
- ❖ It is at par or better than many leading centres
- ❖ Recurving and rapidly/slow moving tracks are still challenging

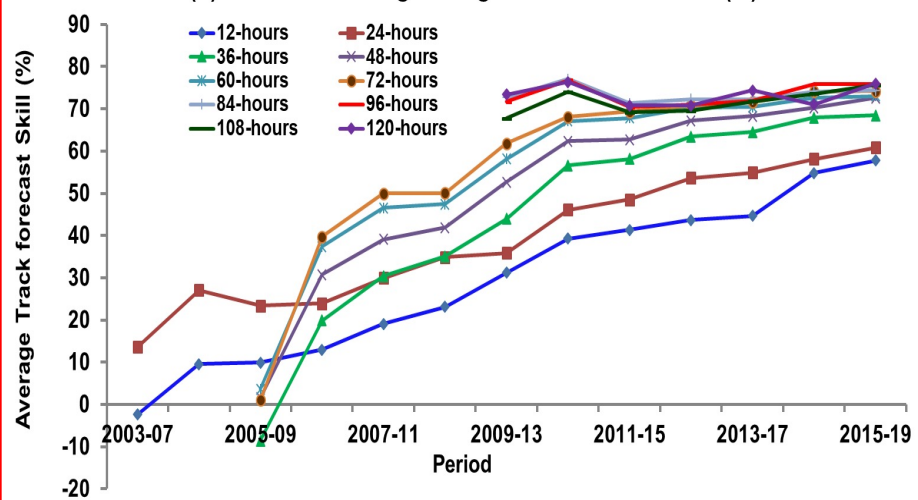

(a) Five Year Moving Average-Track forecast Error (km)

Average Track Forecast Error (km)

(b) Five Year Moving Average-Track forecast Skill (%)

Comparative Average Landfall Point Error (km)

HOW DID IT HAPPEN?

- What was the game changer? Is it Odisha Super Cyclone causing 10,000 human loss?
- National Cyclone Risk Mitigation Project of India-planned from 2005 with IMD as a partner
- Modernisation Programme of IMD, MoES-2007
IMD decides to modernise cyclone warning System through its own modernisation programme
- Modernisation programme of IMD as well as cyclone warning system starts -2008
- All the aspects of cyclone warning system was addressed

HOW DID IT HAPPEN?

- Upgradation of cyclone warning services taken up in holistic manner addressing all components of early warning system including:
 - (i) policy and planning,
 - (ii) Introduction of new tools and technology for monitoring, analysis, forecasting and warning services
 - (iii) Introduction of new methodology for monitoring, analysis, forecasting and warning services
 - (iv) R&D
 - (v) capacity building
 - (vi) confidence building measures and
 - (vii) outreach,

IMPROVEMENT IN POLICY AND PLANNING

- Vision 2020 document was prepared in 2010
- Benchmarking to fix target of forecast accuracy of landfall, track, intensity, heavy rainfall, wind and storm surge in 2010
- 20% by 2015 and 40% improvement by 2020 with base year as 2010.
- ❖ **Standard Operation Procedure** for
 - **Daily Watch and Methodology**
 - **Check list,**
 - **impact based forecast product generation**
 - **Dissemination mechanism and triggering**
- ❖ **DM Act and DM Plan of Govt of India**
- ❖ **National Cyclone Risk Mitigation Project by NDMA**
- ❖ **Cyclone management guidelines of NDMA in 2008.**
- ❖ **Hazard & Vulnerability Atlas as per requirement of NDMA**
- ❖ **Institutional Mechanism: Establishment of Ministry of Earth Science**

Cyclone

- ❖ A low pressure system, where the wind rotates in anticlockwise (clockwise) direction in northern (southern) hemisphere with a minimum sustained wind speed of 34 knots (62 kmph)
- ❖ World Meteorological Organization's official definition :
 - A tropical cyclone (hurricane, typhoon) is a synoptic scale (≥ 100 km) ,
 - non-frontal (no sharp gradient of temperature) **disturbance**,
 - **over** tropical or subtropical **waters** ,
 - **with** organized convection, **and definite** cyclonic surface wind circulation.

WESTERN PACIFIC	TYPHOONS	
AUSTRALIA	WILLY-WILLIES	
MEXICO	CORDONAZO	
PHILIPPINES	BAGIOUS	Named after a city 'BAGUIO' which experienced a rain fall of 116.8 cm in 24 hrs in July, 1911
INDIAN SEAS	CYCLONES	Derived from Greek word 'CYCLOS' – Coil of a Snake
ATLANTIC & EASTERN PACIFIC	HURRICANES	Derived from 'HURACON' - God of Evil (central American ancient aborigines call God of Evil as HURACON

Tropical cyclone

Eye

Eye-wall

- ❖ Horizontal : 100-1000km
- ❖ Vertical : 10-15 km
- ❖ Wind speed : UP to 300 km / hr
- ❖ Average storm speed : About 300 km / day

Spiral cloud bands Convective cells

Eye Wall/ Wall Cloud : Ring of convective clouds around eye.

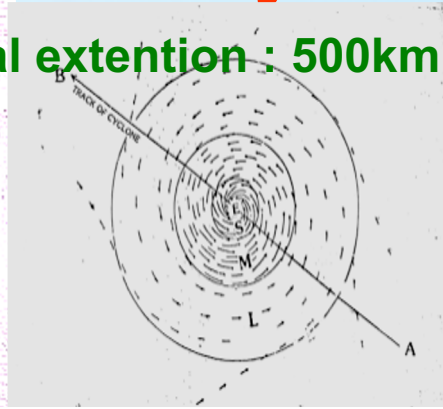

- ❖ **EYE**: Central part, is known as eye. Diameter of eye: 10 to 100 Km
- ❖ Formed by air sinking from upper levels to lower levels and is characterized by calm winds, clear sky and lowest pressure
- ❖ Abrupt cessation of precipitation when eye passes over an area.
- ❖ Shape : Circular or elliptical, Regular/diffused eye, Single/Double eye
- ❖ Eye is warmer than the surrounding.

- ❖ Intense rainbands spiralling inwards. Most dangerous part of the TC.
- ❖ Width of wall cloud is about 20-100 Km.
- ❖ Region maximum pressure gradient, maximum temperature gradient, heaviest precipitation and strongest wind

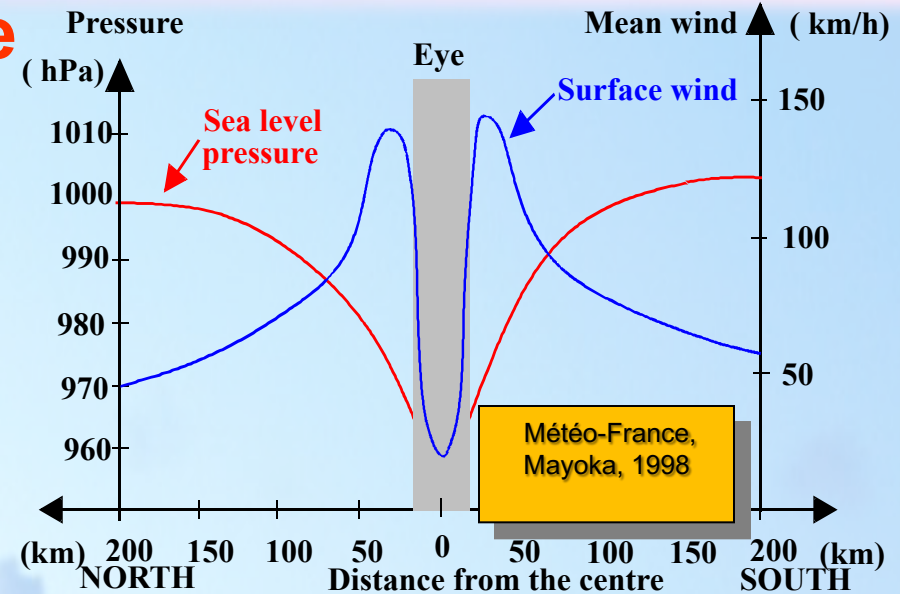

Structure of a Cyclone

Horizontal extension : 500km

Vertical Extension : 15-18 km

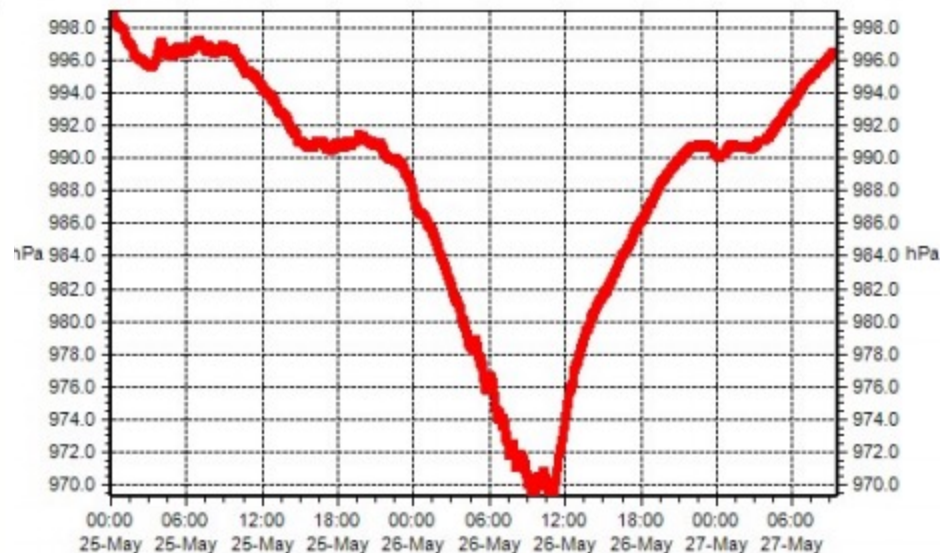

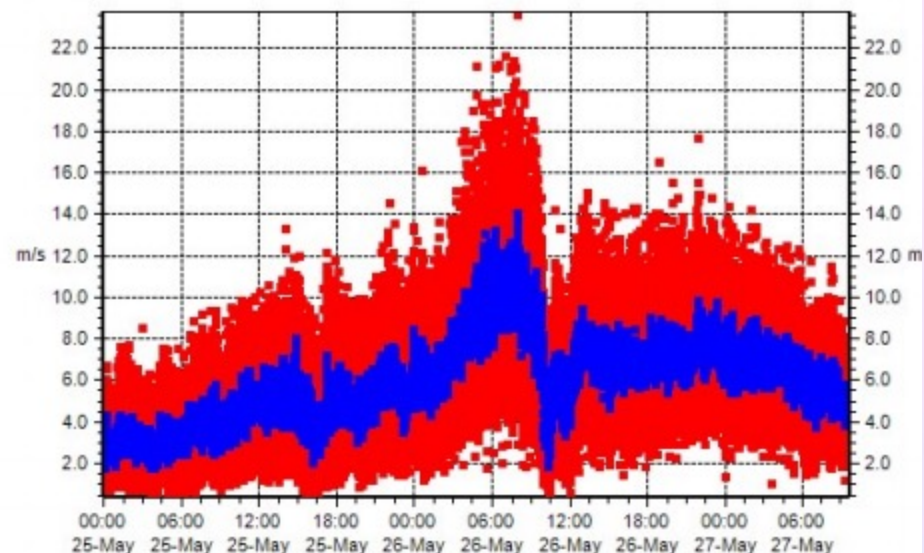

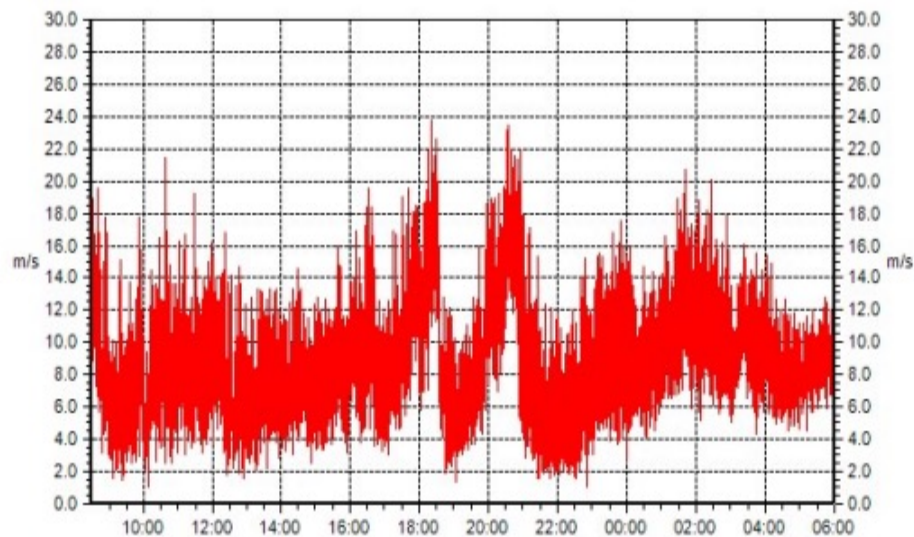

➤ **Vertically : three distinct layers**

(i) **Inflow layer:**

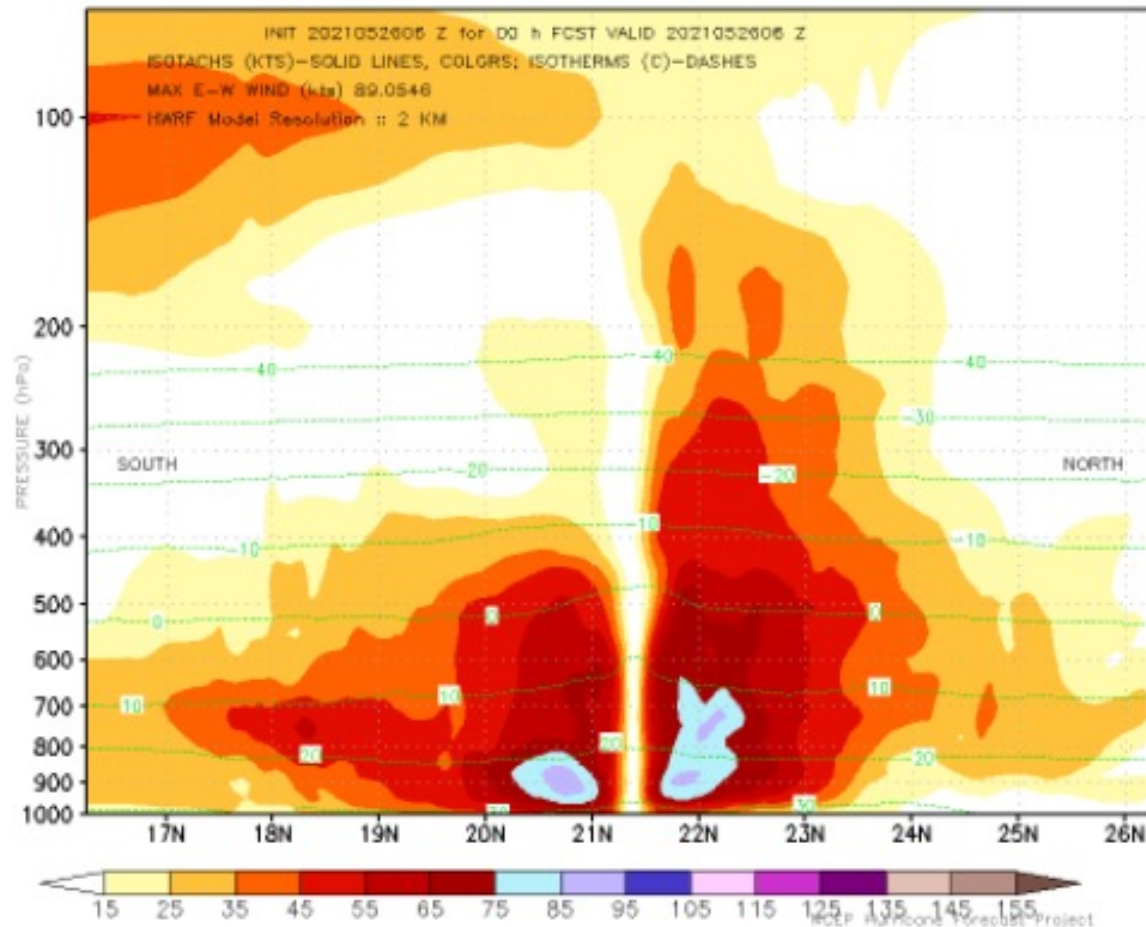

- from surface upto about 3 Kms.
- Strongest inflow : surface to 1Km.
- **Middle layer:** weak inflow, extends from 3 Km to 7.6 km.

- **Outflow layer:** Above 7.6 km. Maximum outflow at 12 km height.
- Flow is cyclonic near core but anti-cyclonic further outwards.
- diameter is small and is about 1° Lat/ Long at 12 km height.

Wind and pressure: Dhamara Wind and pressure: Chandipur

Chasing the cyclone for Mitigation

❖ Reduction of cyclone disasters depends on several factors including

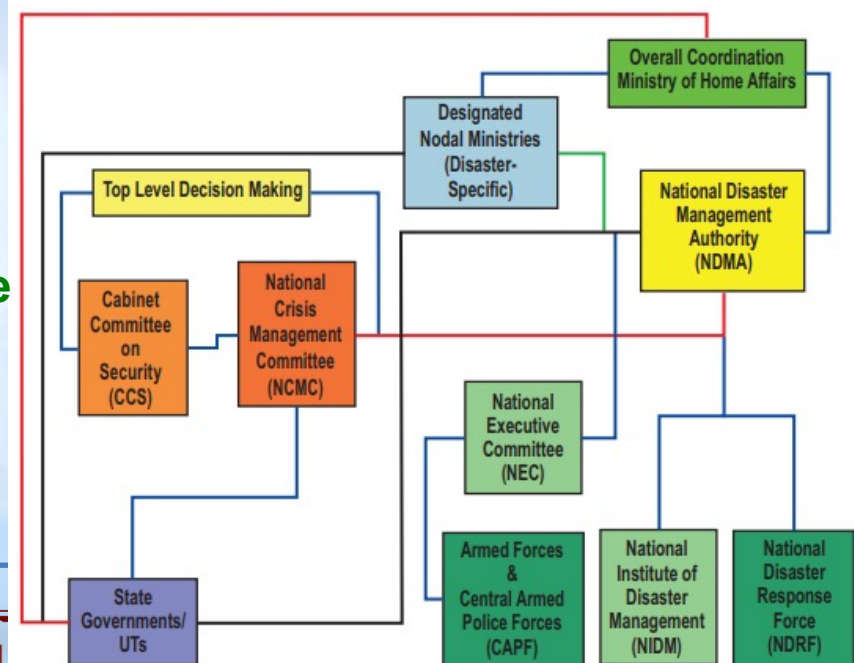

- hazard analysis,
- vulnerability analysis,
- preparedness & planning,
- early warning and mitigation.

❖ The early warning component includes

- skill in monitoring and prediction of cyclone,
- effective warning products generation and dissemination,
- coordination with emergency response units and
- the public perception about the credibility of the official predictions and warnings.

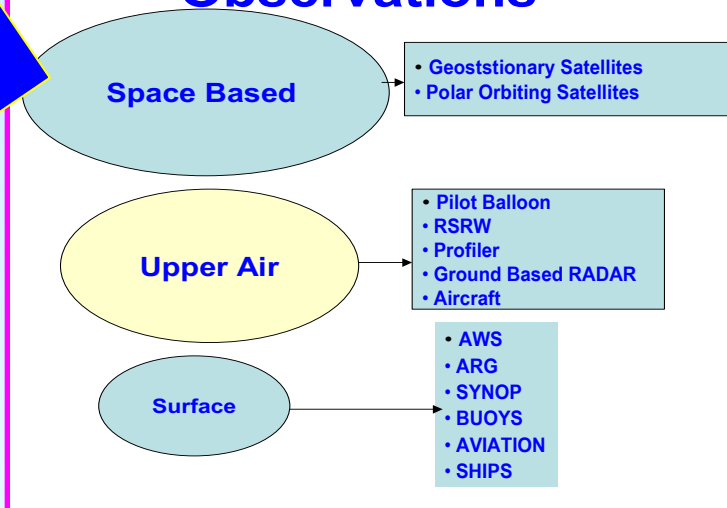

National Disaster Management Institutional Mechanism

Chasing the cyclone through Early Warning System

REGIONAL SPECIALISED METEOROLOGICAL CENTRE-TROPICAL CYCLONES, NEW DELHI
TROPICAL WEATHER OUTLOOK

DEMS-RSMC TROPICAL CYCLONES NEW DELHI DATED 13.05.2020

TROPICAL WEATHER OUTLOOK FOR NORTH INDIAN OCEAN (THE BAY OF BENGAL AND ARABIAN SEA) VALID FOR NEXT 120 HOURS ISSUED AT 0600 UTC OF 13.05.2020 BASED ON 0300 UTC OF 13.05.2020.

BAY OF BENGAL:

A LOW PRESSURE AREA HAS FORMED OVER SOUTHEAST BAY OF BENGAL (BOB) AND ADJOINING SOUTH ANDAMAN SEA WITH ASSOCIATED CYCLONIC CIRCULATION EXTENDING UPTO MID-TROPOSPHERIC LEVELS.

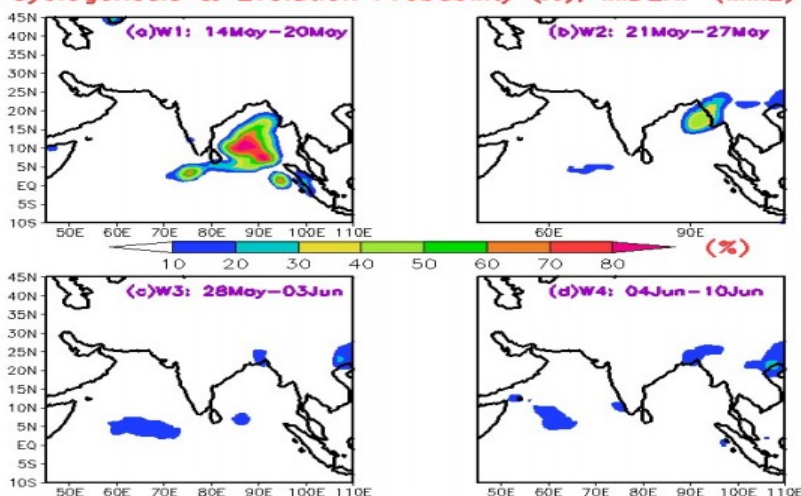

IT IS VERY LIKELY TO CONCENTRATE INTO A DEPRESSION OVER CENTRAL PARTS OF SOUTH BAY OF BENGAL ON 15TH MAY AND FURTHER INTENSIFY INTO A CYCLONIC STORM OVER SOUTHWEST AND ADJOINING WESTCENTRAL BAY OF BENGAL BY 16TH EVENING. IT IS VERY LIKELY TO MOVE NORTHWESTWARDS INITIALLY TILL 17TH AND THEN RECURVE NORTH-NORTHEASTWARDS.

PROBABILITY OF CYCLOGENESIS DURING NEXT 120 HRS:

WARNING SERVICES DURING CYCLONE YAAS: AN EXAMPLE

- **1st Press Release:** 19th May (3 days prior to formation of LPA on 22nd May). Adverse weather warnings and advisories for fishermen issued.
- **2nd Press Release & Special Message:** 22nd May on formation of LPA (4 days prior to landfall) indicating formation of cyclonic storm over Bay of Bengal and system to reach northwest BoB near north Odisha-West Bengal coasts around 26th morning.
- **Pre cyclone watch** for Odisha-West Bengal coasts issued at 1350 hrs IST of 23rd May, on development of depression over eastcentral BoB (about 70 hours prior to landfall).
- **Cyclone alert** for Odisha-West Bengal coasts issued at 0830 hrs IST of 24th May, on intensification of the system into the cyclonic storm YAAS (about 54 hours prior to landfall).
- **Cyclone Warning** for Odisha-West Bengal coasts issued at 2030 hrs IST of 24th May, when the system was a cyclonic storm over eastcentral BoB (about 39 hours prior to landfall)
- **Post landfall outlook for interior districts of Odisha and West Bengal** issued at 1700 hrs IST of 25th, when system was an severe cyclonic storm over northwest and adjoining areas of BoB (about 18 hours prior to landfall)

MEETINGS ATTENDED BY DGM IMD

- ❖ High Level meeting chaired by Secretary, NDMA on 21st May.
- ❖ NCMC Meeting chaired by Cabinet Secretary on 21st May
- ❖ Briefing meeting under Chairmanship of Hon'ble Prime Minister on 22nd May.
- ❖ Preparedness Meeting chaired by Union Home Minister on 24th May.
- ❖ Review Meeting under joint Chairmanship of Hon'ble Ministers of State for Ports, Shipping & Waterways (I/C), Commerce & Industry and Petroleum and Natural Gas on 24th
- ❖ Briefing meeting under chairmanship of Hon'ble Prime Minister on 27th May.

Storm Surge and Coastal Inundation Guidance

Components of sea level elevation

- Astronomical Tide, Wind waves, Wave set up, Storm surge, Tsunamis

Factors affecting Storm Surge

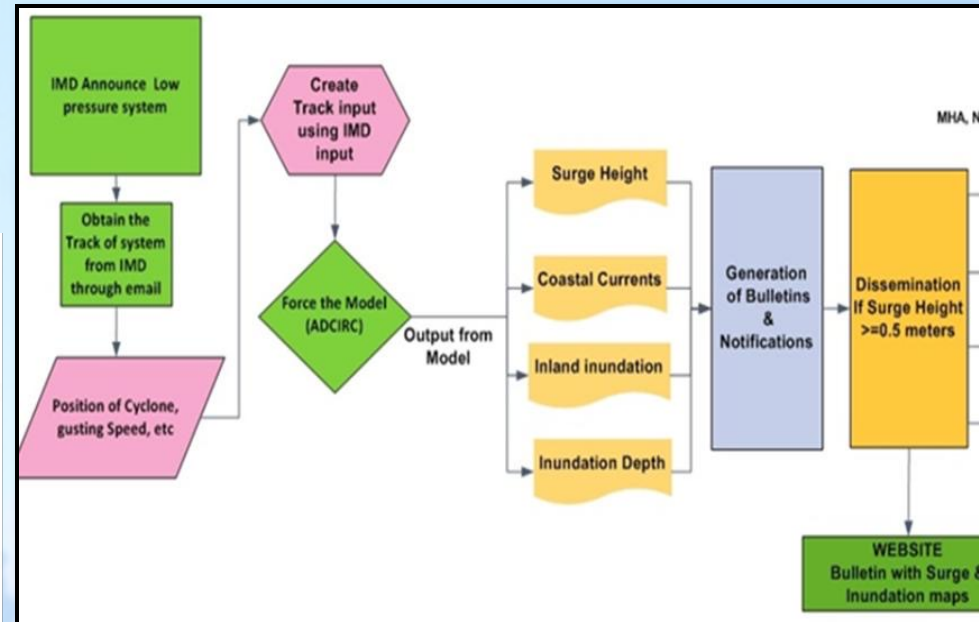

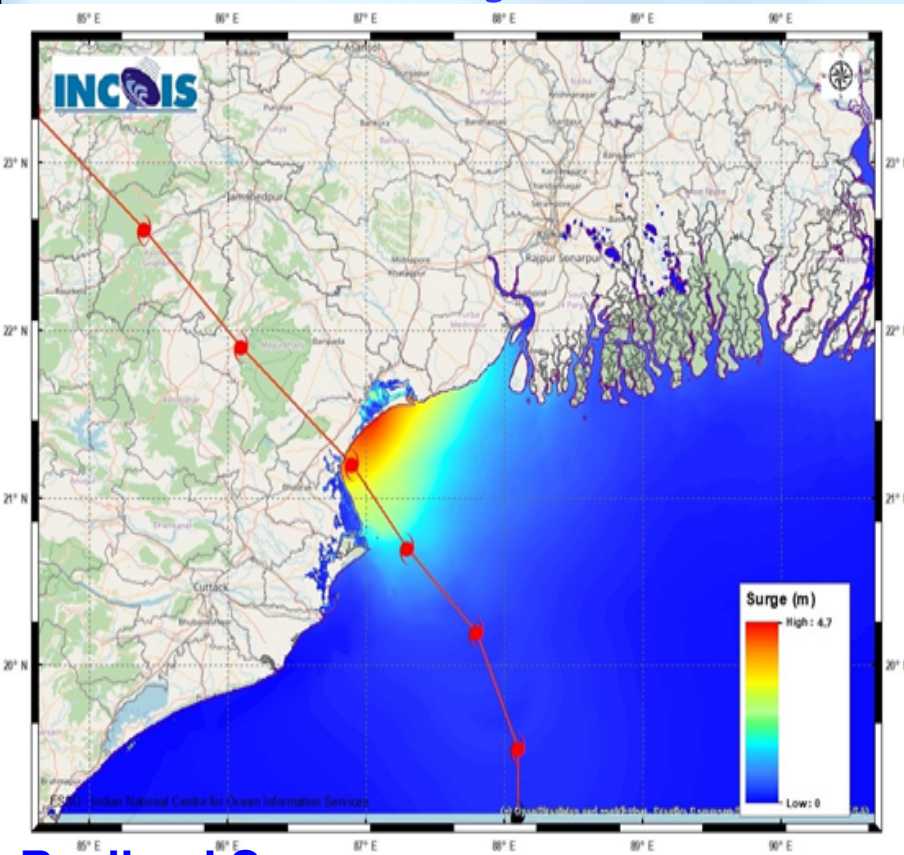

- ❖ Meteorological factors: Intensity, wind stress, RMW, Size, Speed of storm, angle of hit.
- ❖ Hydrological factors: Past rainfall, current rainfall, soil moisture, storm tide, wave set up,
- ❖ Hydrometeorological factors: River discharge, run off
- ❖ Coastal bathymetry (shallow/deep) & coastal geometry (concave or convex towards sea)
- ❖ Topography (hills/ plains/ deltaic region)

Forecast of Storm Surge

Forecasting

- ✓ Nomograms
- ✓ IITD model
- ✓ INCOIS Storm Surge Model

Forecast: Tidal waves of height **2-4 meters** above astronomical tide to inundate low lying areas of Balasore, Bhadrak and **2 meters** above astronomical tide to inundate low lying areas of Medinipur, 24 Parganas, Kendrapara & Jagatsinghpur Districts.

Realised Surge:

About 2-4 meters inundated low lying areas of Balasore and Bhadrak 24 parganas, medinipur districts).

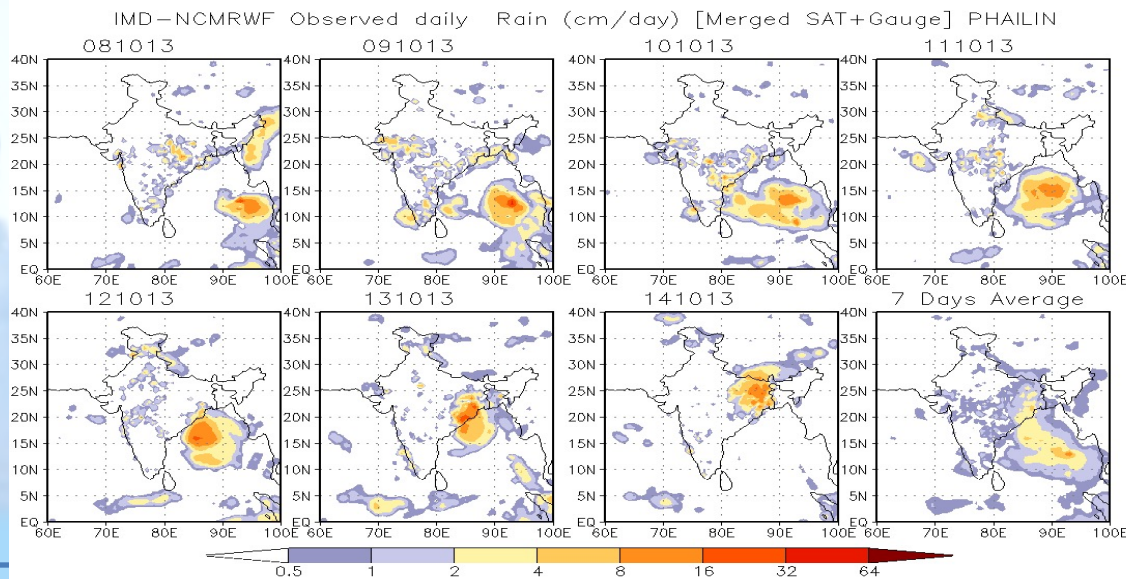

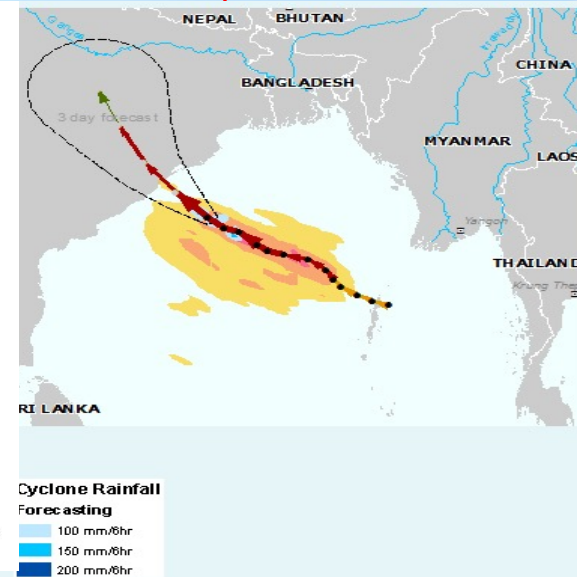

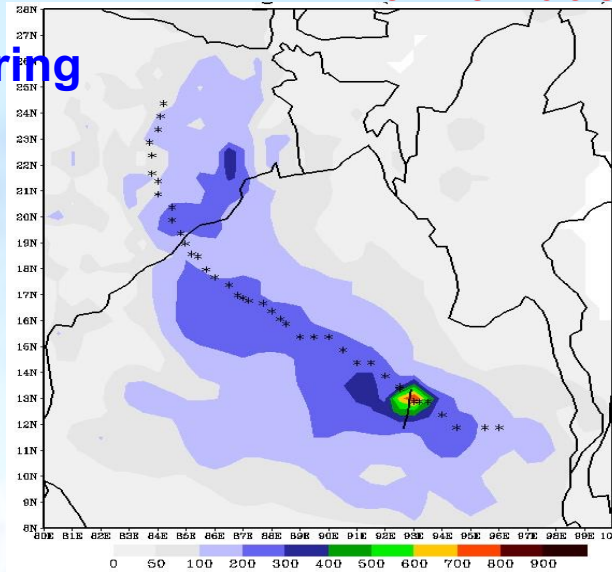

Technology and Rainfall Mapping

Rainfall due to Phailin, Oct. 2013

Rainfall, Monitoring

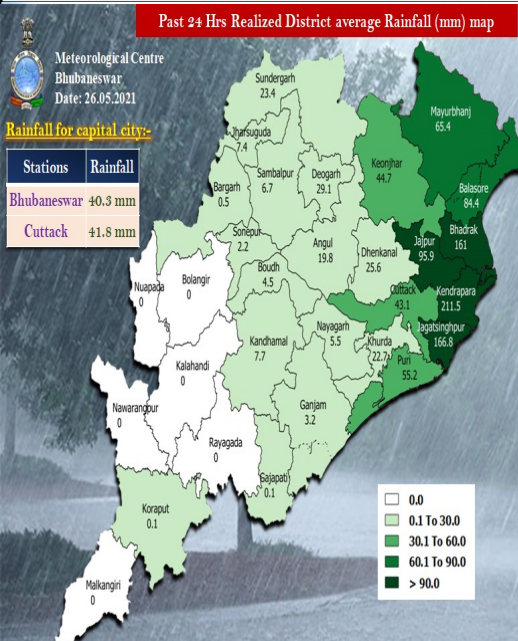

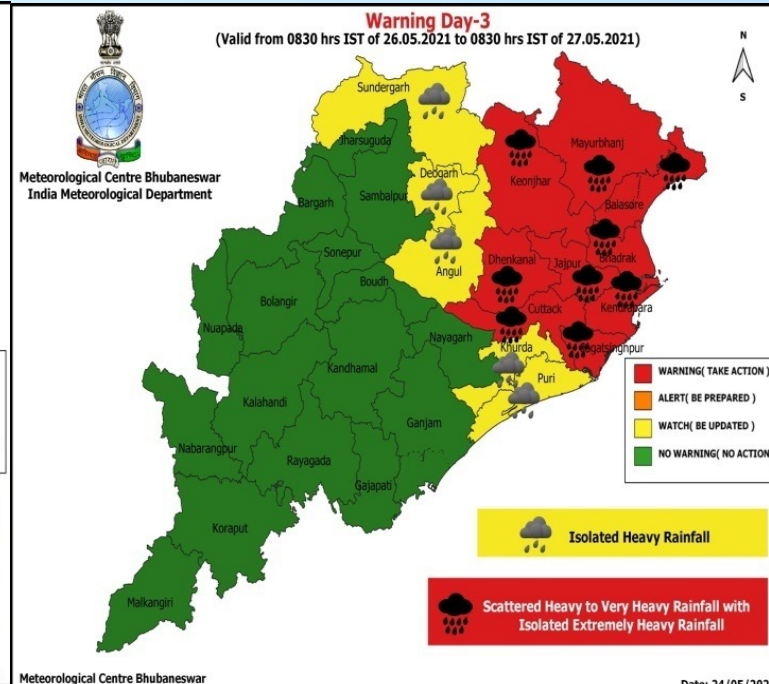

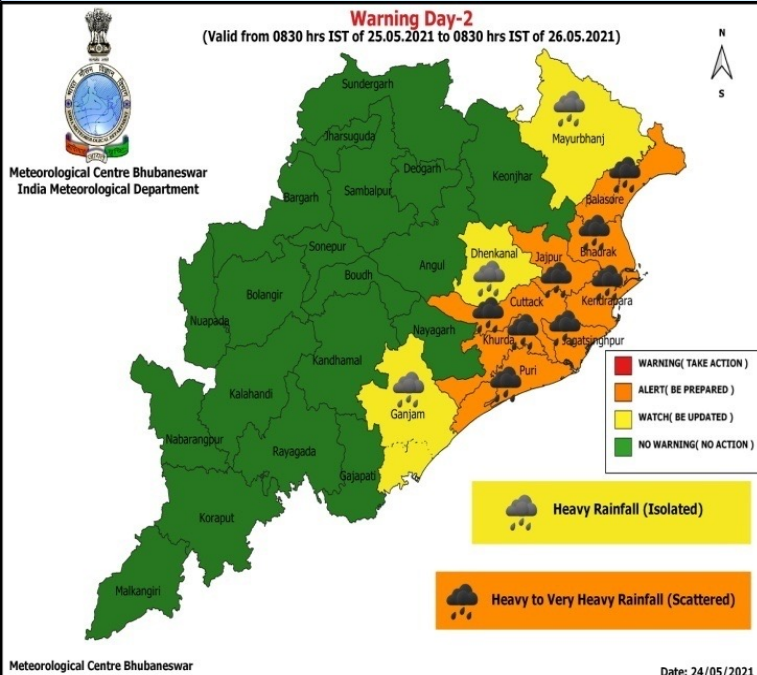

- ❖ Rain gauge based monitoring
- ❖ Satellite and Radar based monitoring

GIS/Geospatial- Infrastructure, settlements, land use..

Cartographic, Geological, Hydro-meteorological ..
Geospatial Data – Vector and Raster

Cyclone Warning Organisation

Institutional Mechanism

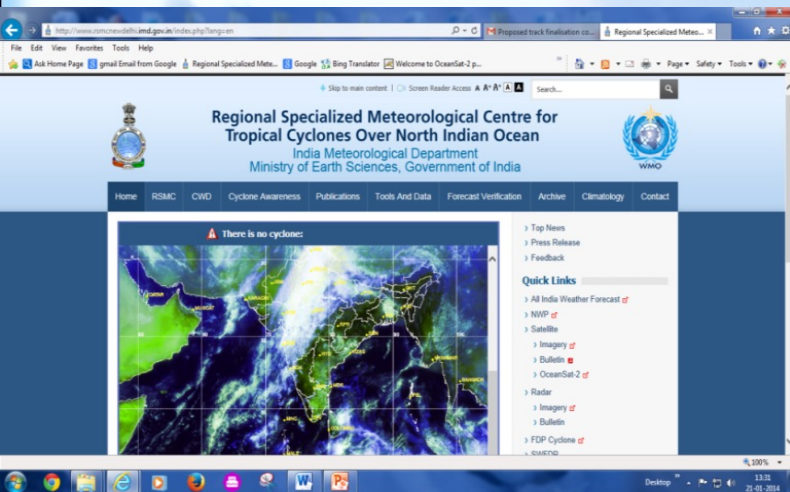

- IMD is mandated to monitor and issue warnings regarding tropical cyclones over the north Indian ocean for the country.
- **International Responsibility:**
- ❖ IMD also acts as RSMC to provide tropical cyclone advisories to **13** countries under WMO/ESCAP Panel (Bangladesh, India, Maldives, Myanmar, Oman, Pakistan, Sri Lanka, Thailand, Yemen, UAE, Saudi Arabia, Qatar, Iran).
- ❖ Acts as a Tropical Cyclone Advisory Centre for international civil aviation
- ❖ Provides Global maritime Distress Support System (GMDSS) over NIO.

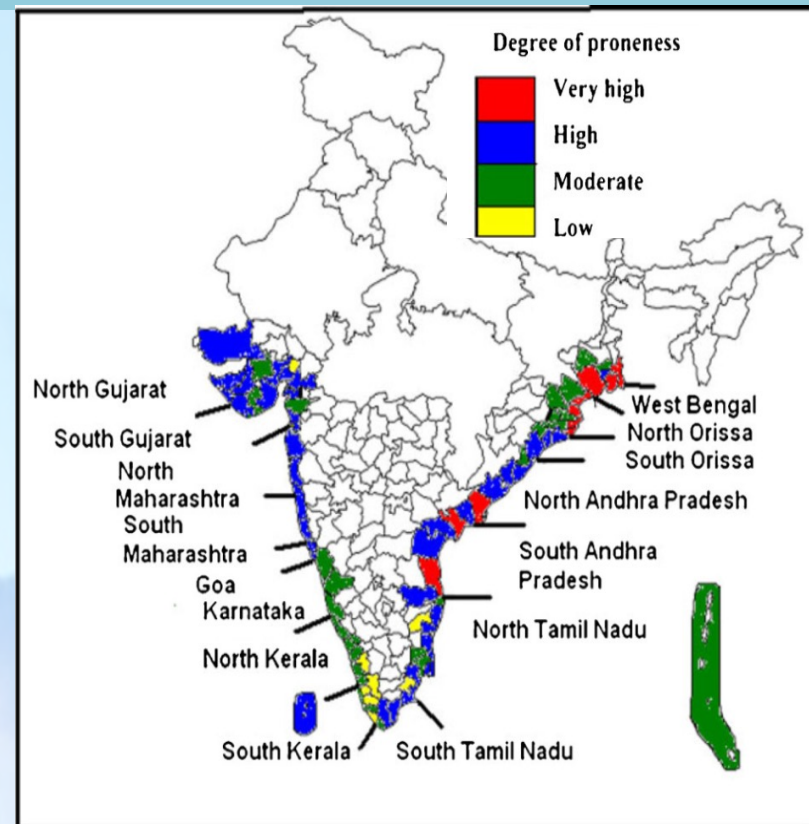

Advances in Warning Dissemination Mechanism

- ❖ Telephone, Tele-fax, Mobile Phones (SMS) through IMD severe weather network, Agromet Network, INCOIS network.
- ❖ VHF/HFRT/Police Wireless
- ❖ Satellite based cyclone warning dissemination System
- ❖ Aeronautical Fixed Terminal Network
- ❖ Global telecommunication system (GTS), Mobile App : Mausam, Damini, Meghdoot,
- ❖ Websites, Dedicated website for cyclone (rsmcnewdelhi.imd.gov.in)
- ❖ Radio/TV, News Paper network (AM, FM, Community Radio, Private TV) : Prasar Bharati and private broadcasters
- ❖ NAVTEX , Internet (e-mail), ftp
- ❖ GAMES and NAVIK

R&D AND CAPACITY BUILDING

- (i) Forecast demonstration projects on landfalling cyclones
- (ii) Data bases for R&D activity:
 - (a) Cyclone E-Atlas and Web-Atlas
 - (b) Cyclone Characteristics (Three/Six hourly best track, Energy Metrix, Life Cycle, Structure, Movement, Landfall characteristics)
- (c) Digitisation of Annual RSMC Reports during 1990-2018,
- (d) Hazard proneness of coastal districts,
- (iii) Organisation national/international Conference and Workshops
- (iv) National and international networked programmes

Cyclone Hazard Prone Districts based on Frequency, Intensity, Wind strength, Precipitation and storm surge

Way Ahead

- ❖ Still there are gaps in technology vis-a-vis capability.
- ❖ Gap in scientific understanding & representation in NWP modeling:
 - Detailed structure and dynamics of cyclones
 - Interaction between cyclone, Ocean, the surrounding environment
 - Internal physical and dynamical processes in clouds.
- ❖ Still scope for improvement in Forecast skill. Intensity forecast is still challenging. **20-25% improvement in accuracy is targeted by 2030**
- ❖ Dynamical impact based forecast & risk based multi-hazard early warning utilising digital information on geo-physical hazards, geo-spatial information and socio-economic indicators
- ❖ Warning dissemination to improve with Common Alert Protocol and for most vulnerable groups in remote areas (e.g. fishermen at deep sea)
- ❖ **MoES is continuously upgrading its plan and strategy for all the above**
- ❖ Lessons learnt from past cyclones will be used for future

Way Ahead

- ❖ Technology plays a dominant role.
- ❖ Scope for Improvement with technology
 - High resolution & improved sensor tech.
 - Crowd sourcing observations, AI/ML
 - Digital forecasting
 - Dynamic IBF & risk based warning
- ❖ Regular dynamic update of digital data base in Web DCRA –DSS.
- ❖ CAP and mobile App to serve various strata of Community & Users in Local Language
- ❖ Space based communication, GAMES and NAVIC
- ❖ GIS based Cyclone Hazard, vulnerability & risk Atlases

Provide Information for Weather Event

Select State (Select State name here)

Districl will be listed here.

Select District (Select District name here)

Time of Weather Event

Midnight (0000-0030 Hrs) ☐ Early Hours (0030-0130 Hrs) ☐ Morning (0130-0330 Hrs) ☐ Forenoon (0330-0530 Hrs) ☐ Noon (0530-0730 Hrs) ☐ Afternoon (0730-0930 Hrs) ☐ Evening (0930-1130 Hrs) ☐ Night (1130-0000 Hrs) ☐

Weather Parameters	Please check the required weather event
Sun	<input type="checkbox"/>
Clouds	<input type="checkbox"/>
Thunder/Lightning	<input type="checkbox"/>
Hailstorm	<input type="checkbox"/>
Duststorm	<input type="checkbox"/>
Fog	<input type="checkbox"/>
Snow	<input type="checkbox"/>
Dark Wind (VGT scale)	<input type="checkbox"/>
Damage Caused	Tree branches breaking <input type="checkbox"/> Small trees uprooting <input type="checkbox"/> Big trees uprooting <input type="checkbox"/> Telegraph poles / Transmission tower damaged by bending <input type="checkbox"/> Telegraph poles / Transmission tower uprooting <input type="checkbox"/> Damage to Katcha structures (houses, verandahs) <input type="checkbox"/> Damage to Public structures (houses, schools) <input type="checkbox"/> Flooding of land <input type="checkbox"/> Damage/Death to livestock <input type="checkbox"/> Damage/Death to Humans <input type="checkbox"/> Damage to vegetation crops <input type="checkbox"/>
